

Empower Citizen Analysts

Day-to-day operations involve Line of Business (LOB) systems catering to various audiences from single departments to company-wide applications like Payroll and Expense Reporting. Integration between systems is rare, leaving Information Workers (IWs) to manually collect and compile data through methods prone to errors. Our Empower Citizen Analysts (ECA) offering enables IWs to streamline data integration and analysis, reducing manual efforts and enhancing decision-making.

Key Features of ECA

Seamless Data Integration

ECA enables IWs to establish durable connections without IT assistance, ensuring reliable data access across disparate systems.

Analyst Empowerment

ECA enables analysts, business analysts and business architects by reducing manual data acquisition efforts and automating comprehensive views of business operations.

Cross-Department Reporting

ECA facilitates the correlation of data from Finance, Payroll, HR, and other LOB systems, enabling non-IT personnel to efficiently manage cross-departmental reporting.

ECA Business Benefits

- **Streamlined Reporting:** ECA empowers IWs to produce reports more efficiently, leveraging their understanding of business operations to enhance report outputs.
- **Enhanced Report Accuracy:** Reports benefit from improved accuracy through automation as IWs integrate data sources.
- **Increased Report Value:** ECA enhances the value of reports by enabling IWs to incorporating diverse data sources, enriching insights and decision-making capabilities.
- **Accelerated Time-to-Report:** ECA facilitates faster report generation, enabling IWs to swiftly compile and analyze data from multiple sources, reducing time-to-insight.

Our **ECA** offering simplifies IW- and analyst-led data integration and analysis across disparate systems by reducing manual processes. ECA improves accuracy, increases efficiency and enables faster, informed decision-making by facilitating seamless information flow across an organization.
